

GENERATE BIOMEDICINES, INC.

RESPONSIBLE USE OF AI

We are pioneering the field of Generative Biology™: a revolutionary approach to drug development that allows us to program protein-based modalities for the first time. As pioneers in this emerging field, we believe it is essential to guide responsible use of AI and emerging technologies, continually monitor and examine the impact of our initiatives and developments in our field, and communicate the implications of our research.

Generate:Biomedicines is committed to the responsible stewardship of AI/ML approaches and recognizes the potential value of clear regulatory frameworks to help guide the further development and use of this technology over time. We routinely monitor and engage in dialogue with policymakers, government officials, academics and industry colleagues to share our perspective and experience, with the goal of informing the conversation and any decisions about use of a powerful technology that we believe can have a tremendous impact on human health. Several senior members of our Generate community are individual signatories to the Community Values, Guiding Principles, and Commitments for the Responsible Development of AI for Protein Design, which originated from public/private sector discussions late in 2023 and was advanced by Responsible AI x Biodesign.

We will remain active and engaged members of the generative AI community, continually assessing best practices, evolving frameworks and working to ensure that human health benefits from the responsible application of one of the most powerful technologies of our lifetime.
